

VMS Application

Clarification on Enhancement Points #21, #31 & #41

Point #21 — Total Visitors Card: Monthly Confirmed Visitors Count

Screen Name

Home / Dashboard screen — “Total Visitors” card (highlighted in red below).

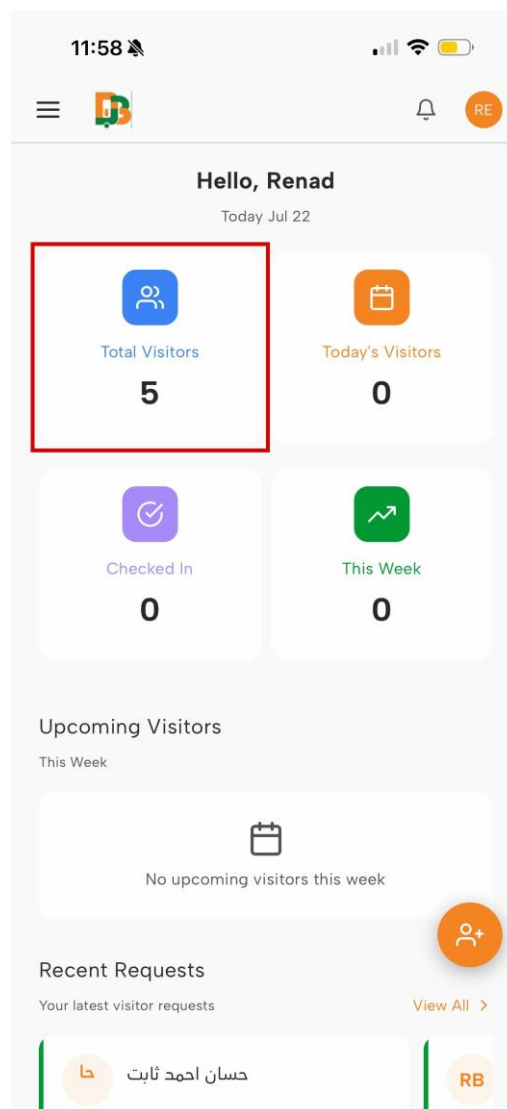

Applies To

All roles whose dashboard includes the “Total Visitors” card.

Required Behavior

The “Total Visitors” card should be updated to reflect the number of confirmed visitors from the beginning of the current month up to the current date, instead of the overall total.

- Example: as of today (July 22), the card should display the count of confirmed visitors from July 1 to July 22.
- At the start of each new month, the count restarts from that month’s first day.

Point #31 — My Requests Screen: Status & Date Filters

Screen Name

My Requests screen — filter tabs at the top of the list (highlighted in red below).

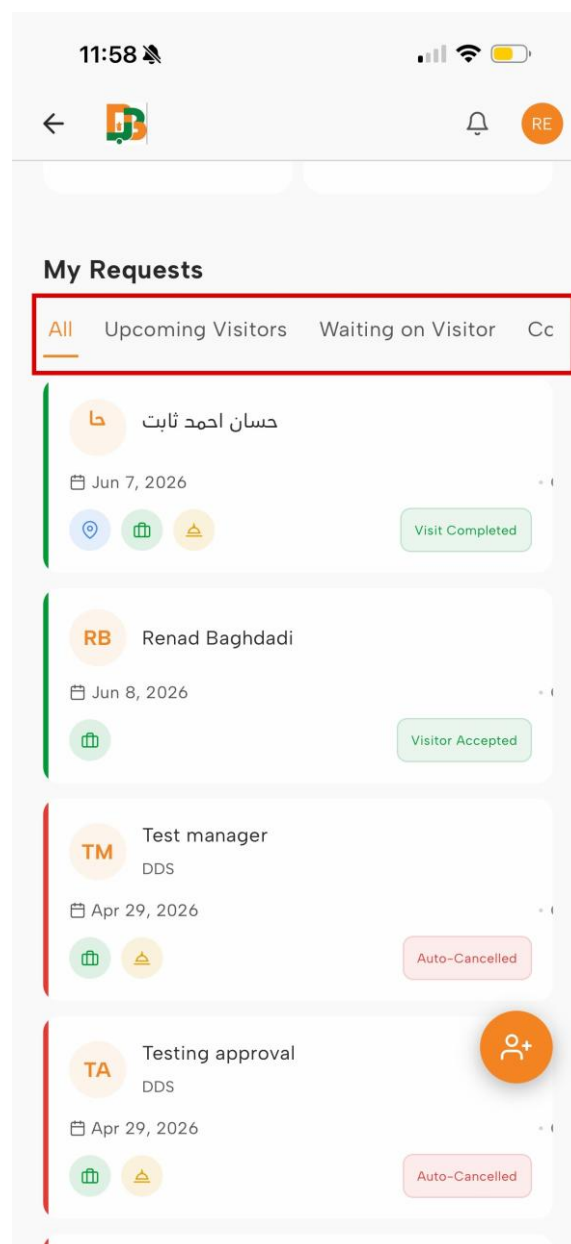

Applies To

All roles that have access to the “My Requests” page.

Required Behavior

The current filter tabs should be replaced with filters that reflect the visit statuses, in addition to a date filter:

- Checked In
- Checked Out
- To Be Checked
- Date filter — to filter the requests by visit date.

Point #41 — Upcoming Visitors: Group Visit Cards by Date

Screen Name

Home / Dashboard screen — “Upcoming Visitors (This Week)” section (highlighted in red below).

Applies To

All roles whose dashboard includes the “Upcoming Visitors” section.

Required Behavior

The visit cards in the “Upcoming Visitors” section should be grouped by date across the current week, so the visits are displayed under a date header for each day:

- Example: a header for 7/22 with the cards of that day’s confirmed visits listed below it, followed by a header for 7/23 with its confirmed visits, and so on for the rest of the week.
